

# EXPLAINING CONDITIONAL COOPERATION IN REPEATED PUBLIC GOODS GAMES

---

Paul J. Healy and Kirby Nielsen  
The Ohio State University

ESA World Meeting 2017

# REPEATED LINEAR PUBLIC GOODS GAME

- $u_i(s_i, s_{-i}) = \underbrace{\frac{\alpha}{n} \sum s_j}_{\text{"Group Account"}} + \underbrace{(\omega_i - s_i)}_{\text{"Individual Account"}} \quad \text{"MPCR": } \frac{\alpha}{n} < 1.$
- Isaac Walker & Thomas (1984):

- Current understanding: (Imperfect) **Conditional Cooperation** (Fischbacher & Gächter 2010, Croson 2007)

# MODELING CONDITIONAL COOPERATION

- Beliefs decline along with contributions
- Which is causing which?
- Contributions could decline *because* beliefs are declining...
  - Reciprocity (Rabin 1993, e.g.)
    - I reciprocate expected kindness with kindness
    - $\downarrow \text{FOB} \Rightarrow \downarrow \text{expected kindness}$
  - Guilt aversion (Charness & Dufwenberg 2006, e.g.)
    - I feel bad if I don't meet your expectations of me.
    - $\downarrow \text{SOB} \Rightarrow \downarrow \text{guilt}$

# MODELING CONDITIONAL COOPERATION

- Beliefs decline along with contributions
- Which is causing which?
- Contributions could decline *because* beliefs are declining...
  - Reciprocity (Rabin 1993, e.g.)
    - I reciprocate expected kindness with kindness
    - $\downarrow \text{FOB} \Rightarrow \downarrow \text{expected kindness}$
  - Guilt aversion (Charness & Dufwenberg 2006, e.g.)
    - I feel bad if I don't meet your expectations of me.
    - $\downarrow \text{SOB} \Rightarrow \downarrow \text{guilt}$
- Or, beliefs could follow contributions...
  - $\downarrow \text{contributions} \Rightarrow \downarrow \text{Bayesian updating of FOBs}$

# MODELING CONDITIONAL COOPERATION

- Beliefs decline along with contributions
- Which is causing which?
- Contributions could decline *because* beliefs are declining...
  - Reciprocity (Rabin 1993, e.g.)
    - I reciprocate expected kindness with kindness
    - $\downarrow \text{FOB} \Rightarrow \downarrow \text{expected kindness}$
  - Guilt aversion (Charness & Dufwenberg 2006, e.g.)
    - I feel bad if I don't meet your expectations of me.
    - $\downarrow \text{SOB} \Rightarrow \downarrow \text{guilt}$
- Or, beliefs could follow contributions...
  - $\downarrow \text{contributions} \Rightarrow \downarrow \text{Bayesian updating of FOBs}$

**Idea:** Exogenously manipulate beliefs and see if this affects contributions

**DESIGN**

# EXPERIMENTAL DESIGN

- Groups of 3
  - $MPCR=0.6$
  - Endowment: \$10
  - Contribute \$0, \$5, or \$10 to 'Group Account'
- 10 periods with random re-matching
- Elicitation every period
  - Utilities over strategies
  - FOB of others' utilities
  - SOBs: belief of others' beliefs of my contribution
  - Contribution choice
- Provide data from past experiment (belief manipulation)
  - Opportunity to revise contribution choice

# $BR(\cdot)$ : PREFERENCES OVER STRATEGIES

Conditional strategy choices (Fischbacher & Gächter 2010)

How much will you allocate to the Group Acct <i>IF</i> PLR2 allocates \$0 and PLR3 allocates \$0?		
<input type="radio"/> <b>You allocate \$0.00</b> PLR2 allocated \$0.00 PLR3 allocated \$0.00	<input type="radio"/> <b>You allocate \$5.00</b> PLR2 allocated \$0.00 PLR3 allocated \$0.00	<input type="radio"/> <b>You allocate \$10.00</b> PLR2 allocated \$0.00 PLR3 allocated \$0.00

How much will you allocate to the Group Acct <i>IF</i> PLR2 allocates \$5 and PLR3 allocates \$0?		
<input type="radio"/> <b>You allocate \$0.00</b> PLR2 allocated \$5.00 PLR3 allocated \$0.00	<input type="radio"/> <b>You allocate \$5.00</b> PLR2 allocated \$5.00 PLR3 allocated \$0.00	<input type="radio"/> <b>You allocate \$10.00</b> PLR2 allocated \$5.00 PLR3 allocated \$0.00

- Also FOB: best guess of opponent's  $BR(\cdot)$ .
- Actually played out.

Guess how likely Player 2 thought it was that **you** would allocate \$0, \$5, or \$10 to the Group Account.

**What Is Your Guess Of Player 2's Probabilities of YOU Choosing Each Allocation Level?**

Player 2 **thinks I** will choose to:

Allocate \$10 to the Group Acct with probability ,

Allocate \$ 5 to the Group Acct with probabilitiy , and

Allocate \$ 0 to the Group Acct with probability .

- Incentivized elicitation

# BELIEF MANIPULATION

We are now showing you data from a previous experiment.  
You may revise your allocation choice if you wish.

## Data From a Previous Experiment:

In an experiment on Apr 6th at 12pm,  
24% of people chose to allocate \$10,  
43% chose to allocate \$5, and  
33% chose to allocate \$0  
to the group account in Period 1.

## Make Your Allocation Decision Here:

(Your previous choice was to allocate \$5.00 to the group account.)

\$10 to Group Acct  
(\$0 to Indiv Acct)

\$5 to Group Acct  
(\$5 to Indiv Acct)

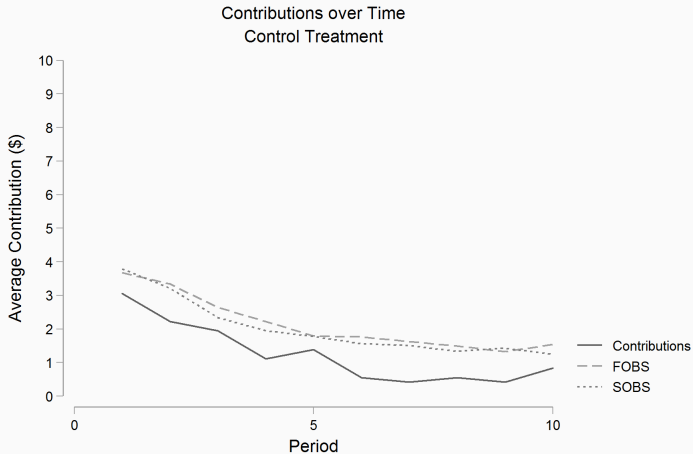

\$0 to Group Acct  
(\$10 to Indiv Acct)

You will not see others' actual decisions until the end of the period.

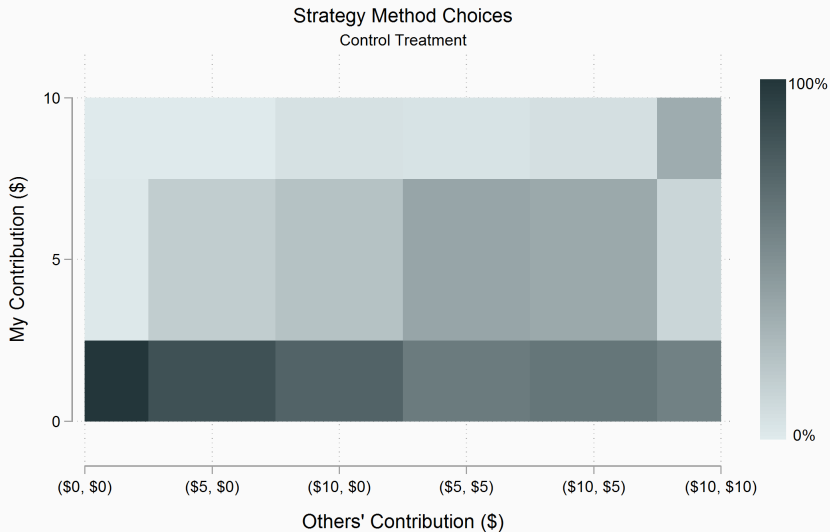

- After making initial contribution decision, give subjects data from previous sessions
  - Past contributions  $\Rightarrow$  manipulate FOBs
  - Past FOBs  $\Rightarrow$  manipulate SOB
  - No past data (control)  $\Rightarrow$  no manipulation

## RESULTS

# CONTRIBUTIONS AND BELIEFS: CONTROL

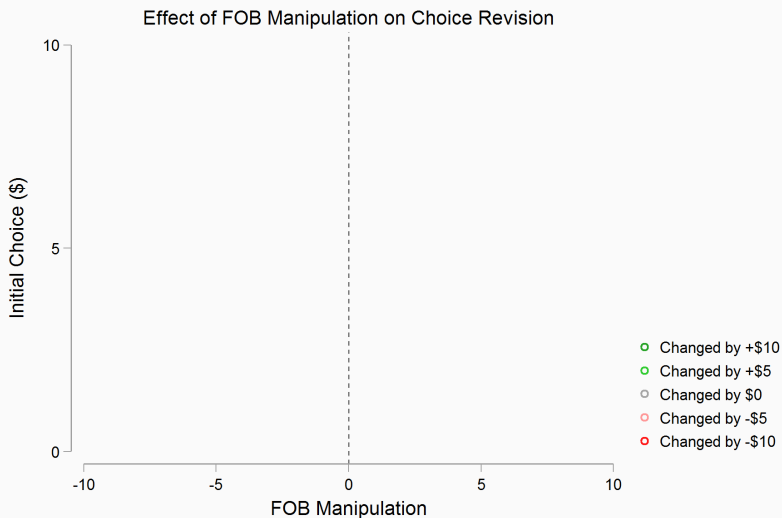

# CONDITIONAL COOPERATORS

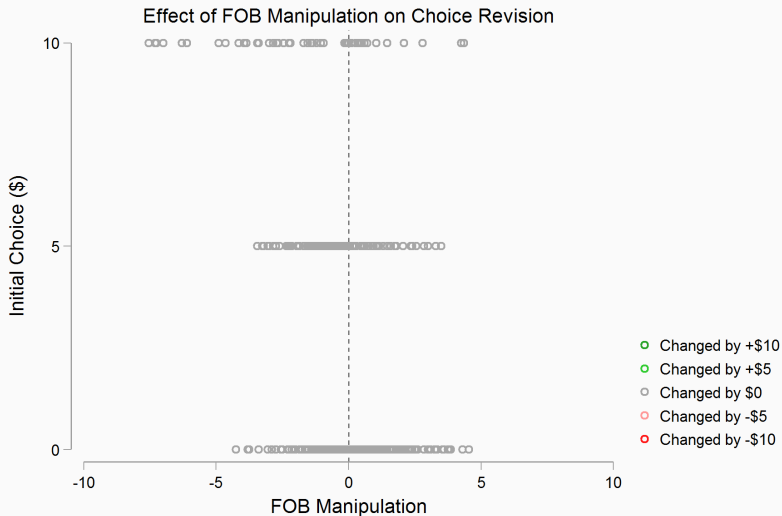

**Do contributions respond to FOBs?**

# DO CONTRIBUTIONS RESPOND TO FOBS?

# DO CONTRIBUTIONS RESPOND TO FOBS?

# DO CONTRIBUTIONS RESPOND TO FOBS?

## DO CONTRIBUTIONS RESPOND TO FOBS?

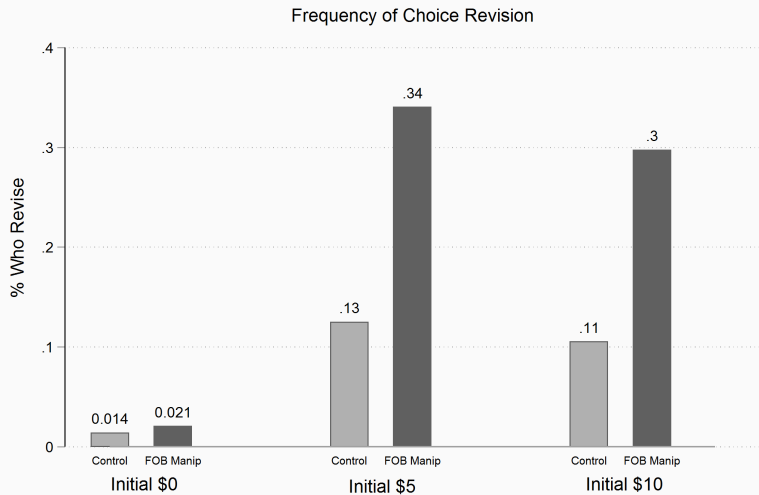

# DO CONTRIBUTIONS RESPOND TO FOBS?

	Change in Contribution
FOB Manipulation	0.0502 (0.0496)
Unselfish	-0.467** (0.231)
Constant	-0.166** (0.0681)
Observations	900
Number of Clusters	90

Robust standard errors in parentheses

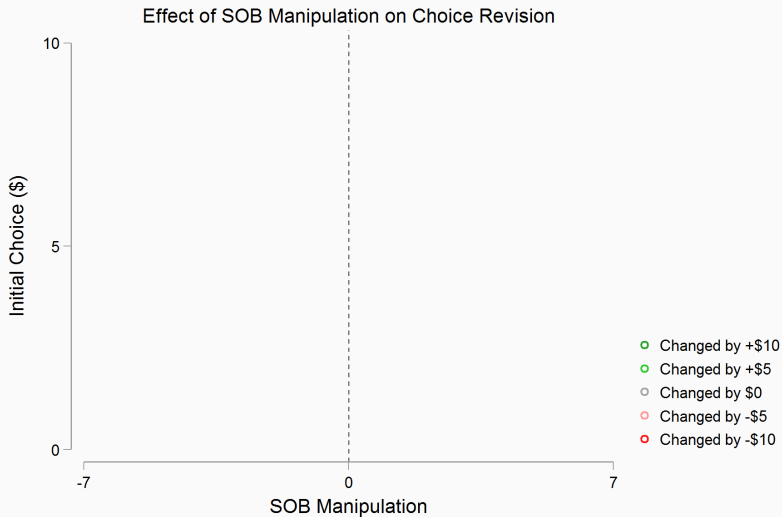

\*\*\*  $p < 0.01$ , \*\*  $p < 0.05$ , \*  $p < 0.1$

# DO CONTRIBUTIONS RESPOND TO FOBS?

**Do contributions respond to SOBs?**

# DO CONTRIBUTIONS RESPOND TO SOBS?

# DO CONTRIBUTIONS RESPOND TO SOBS?

# DO CONTRIBUTIONS RESPOND TO SOBS?

# DO CONTRIBUTIONS RESPOND TO SOBS?

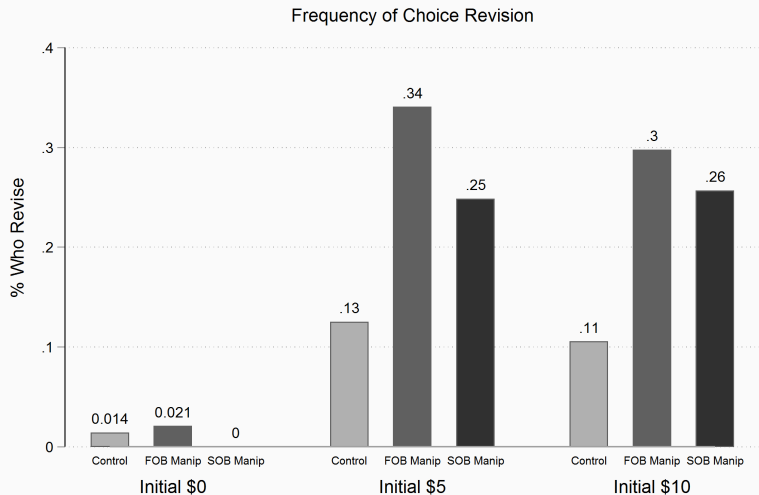

# DO CONTRIBUTIONS RESPOND TO SOBS?

	Change in Contribution
SOB Manipulation	0.0967** (0.0470)
Unselfish	-0.372** (0.141)
Constant	-0.180** (0.0728)
Observations	600
Number of Clusters	60

Robust standard errors in parentheses

\*\*\*  $p < 0.01$ , \*\*  $p < 0.05$ , \*  $p < 0.1$

# DO CONTRIBUTIONS RESPOND TO SOBS?

# SUMMARY

- Exogenously manipulating both FOBs and SOBs leads to choice revision
  - FOB: inconsistent with current models
  - SOB: consistent with guilt aversion
- Evidence that contributions follow beliefs
- We also consider
  - Models of altruism
  - How preferences change over time
  - Belief formation and evolution
  - History-dependence

# DO CONTRIBUTIONS RESPOND TO FOBS?

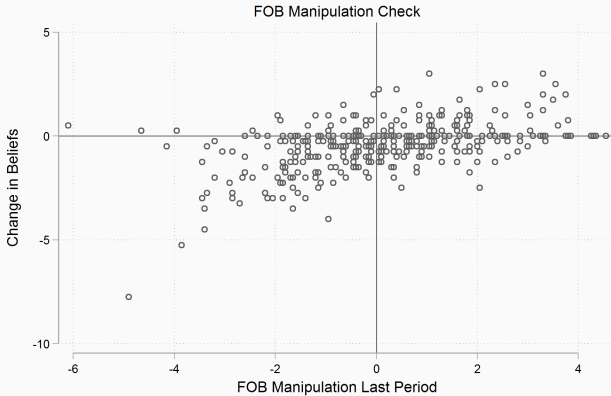

Perfect Conditional Cooperators:

	Final \$10	Final \$5	Final \$0
Change in FOB of \$10	3.598*	-0.375	-0.101
	(1.952)	(0.607)	(0.556)
Change in FOB of \$5	0.305	0.273	0.379
	(0.595)	(0.335)	(0.412)
Change in FOB of \$0	2.195	-0.569	-0.325
	(1.525)	(0.663)	(0.330)
Constant	-1.768	0.270	-1.048*
	(1.420)	(0.981)	(0.592)
Observations	24	76	134
R-squared	0.316	0.024	0.018

Robust standard errors in parentheses

\*\*\*  $p < 0.01$ , \*\*  $p < 0.05$ , \*  $p < 0.1$
